Your Custom Lawn Care Program

1 Early Spring

We apply a pre-emergent granular crabgrass control plus fertilizer. If weather permits, we will treat for annual broadleaf weeds.

2 Spring

We apply a slow release premium granular fertilizer. We treat for broadleaf weeds such as dandelion, clover and other pesky weeds.

3 Early Summer Fertilizer & Merit® Grub Control*

We apply premium slow release granular fertilizer to promote growth. We then treat for weeds for a healthy, weed-free turf.

4 Late Summer/Early Fall

We apply premium slow release granular fertilizer with iron. We target broadleaf weeds at this time.

5 Fall

We apply premium high nitrogen granular fertilizer. We target any broadleaf weeds that may be in the lawn at this time.

6 Winterizer

We apply a quick release premium granular fertilizer. This application stores carbohydrates for winter and helps promote a spring green up.
